

C2C Inc. Begins Exploration Program - Opinaca, Quebec

Montreal December 12th 2006. C2C inc. would like to report that it has commenced its 2006-2007 Exploration Program in the Opinaca Basin of James Bay, Quebec.

Geophysique GPR International has been contracted to fly 1,582 line kilometres of a combined magnetic, electromagnetic, and radiometric survey. This work will commence immediately and the initial results are expected early in the first quarter of 2007.

The Company holds a 100% interest in four (4) claim blocks covering 10,000 hectares. These claims were selected based on the presence of geological host units, structural features, geophysical and soil geochemistry anomalous targets.

All the properties are underlain by the key sedimentary units and associated marker alterations which are characteristic of the host auriferous horizons in contact with intrusive units (thermodynamic metallogeny):

- 1) The Sarcelle property is located twelve kilometres west of the Roberto Gold discovery and contiguous to Virginia Gold Eastmain Resources and Everton/Azimut properties;
- 2) The Eastmain Dam property is contiguous west of the Eastmain Deposit Discovery (310,000 oz Au);
- 3) The Casey and Lloyd Lakes properties are contiguous to Barrick / Azimut in the Eastmain river area just south (\approx 20 km) of the Opinaca basin, where several important gold occurrences were found.

This initial work is required to define the existing targets, the new mineralized occurrences and anomalous geophysical and geochemical axes. Once this is complete the company plans to spend most of its \$1.5M domestic exploration budget on these claims.

C2C is an innovative mining exploration and development company with precious and base metals properties in North America. The company is also actively searching for exploration opportunities in Central and South America more precisely, in Peru and Ecuador.

The TSX Venture Exchange does not accept responsibility for the adequacy or accuracy of this press release.
