C2C INTERSECTS UP TO 5.89 g/t Au OVER 7.4 M IN THE # 2 VEIN ZONE OF THE BLACKCLIFF PROPERTY

Quebec City, March 19 2008: C2C Gold Corporation Inc. (TSX-V: CCN; « C2C ») announces that during the fall of 2007, C2C and its partner Corporation Minière Animiki Ltd. completed realize 35 drill holes for a total of 4,055 meters on the Blackcliff property located north-east of the town of Malartic, within the Val-d’Or mining camp. This drill program was in large part designed to better define the near surface expression of the # 2 vein gold zone where historical resources totaling 222,433 tonnes grading 7.06 g/t Au were reported in 1988 (not compliant with NI 43-101).

Numerous drill holes revealed mineralized intersections with significant grades and/or thicknesses.

A sheared diorite unit characterized by black chlorite inclusions and bearing about 3 % of pyrite associated to quartz-carbonate veinlets (10 à 15 %) intersected the following grades:

HOLE	FROM	TO	INTERSECTION	SECTION
BK-07-07	74.5 m	80.4 m	3.46 g/t Au over 5.9 m	975 E
BK-07-09	70.8 m	78.2 m	5.89 g/t Au over 7.4 m	962.5 E

The main silicified and magnetic grey diorite unit bearing between 2 and 6 % disseminated pyrite reported the following intersections:

HOLE	FROM	TO	INTERSECTION	SECTION
BK-07-10	60 m	61.7 m	2.38 g/t Au over 1.7 m	950 E
	85.3 m	87.0 m	3.42 g/t Au over 1.7 m	

BK-07-11	56.3 m	61.5 m	2.14 g/t Au over 5.2 m	950 E
	70.2 m	72.8 m	10.84 g/t Au over 2.6 m	
BK-07-13	63.0 m	64.0 m	1.08 g/t Au over 1.0 m	925 E
BK-07-14	76.0 m	77.0 m	2.20 g/t Au over 1.0 m	925 E
BK-07-15	54 m	55.5 m	1.13 g/t Au over 1.5 m	912.5 E
	63.0 m	70.5 m	1.04 g/t Au over 7.5 m	

Diamond drill hole BK-07-32 targeted the western extension of # 2 vein revealing numerous mineralized intersections leaving the whole western sector virtually open. The following are the results from within the silicified grey diorite unit :

HOLE	FROM	TO	INTERSECTION	SECTION
BK-07-32	56.7 m	63.0 m	5.03 g/t Au over 6.3 m	737.5 E
	67.5 m	70.5 m	2.0 g/t Au over 3.0 m	

This data will be integrated into the previous database and the whole Blackcliff property and its resources will be evaluated in compliance with NI 43-101. This evaluation's conclusions will dictate the next exploration program to be carried over the next few months.

Ms. Barbara Guimont, P. Geol. is the qualified person pursuant to National Instrument 43-101 and supervised the technical information presented in this news release.

C2C is a gold mining exploration company active in South America and in Quebec. C2C is presently developing projects in Ecuador, namely the Paraiso Mine, in the country's south-west.
